

Product

- ▶ Epicor® ERP
- ▶ Epicor® Commerce Connect

Compatibility

- ▶ Epicor® ERP 10.2.300 or higher

Benefits

- ▶ Allows end customers to easily choose product specifications for online orders
- ▶ Allows extensibility—design the look and feel to match your branding requirement
- ▶ Leverages native browser-based technologies for clean, consistent look and feel across your website

Manage Product Complexity for You and Your Customers

Many business sell products that can be customized—for example by color, size, material and much more. With products such as these, the number of possible combinations the customer could choose can rapidly rise to the thousands, or more. To help manage this complexity, Epicor now offers a native web configuration tool—the Epicor Web Configurator (EWC)—that utilizes the Kinetic design and framework. Epicor Commerce Connect (ECC) includes this configuration tool and configurator module that provides a fast and efficient mechanism to display all product options on a page. This allows your customer to easily choose their own product specifications without the stress of having to navigate through multiple pages to find the combination that best meets their needs.

Full Integration With Epicor ERP

EWC enables Web-based configurations that can be used for quoting and pricing within the ECC solution. Native image control capability enables immediate visual confirmation of configuration results. Once configurations are accepted by your customer, the instant flow to Epicor ERP enables not only price, but also product build to be delivered for more rapid response to a new order.

Modern Web-based UI

EWC leverages native browser-based technologies and standard web concepts—via HTML5, Typescript, and Angular. This allows for your website to be themed to match your corporate styling and also to incorporate additional web technologies and libraries, such as image rendering tools. These tools can, for example, allow your customers to dynamically pick colors or patterns to enable them to see your product in all variations.

Figure 1. This is an example of a standard Epicor Web Configurator screen, without any customization applied.

For more information on the Epicor Web Configurator and other Product Configurator resources, please contact your Account Manager.

Figure 2. Based on the same configurator as in Figure 1, this image takes advantage of custom styling capabilities to allow style consistency with the rest of your site.

Key Features

- ▶ Built using the same configurator tools customers use today
- ▶ Tight integration with Epicor ERP ensures price consistency and seamless transition from order to production
- ▶ Leverages native browser—based technologies
- ▶ Uses standard web concepts: HTML5, CSS, and Angular
- ▶ Based on the Epicor Kinetic framework
- ▶ Optional UI Layering allows configurator look and feel to be designed to your corporate styling
- ▶ Incorporates additional web technologies and libraries such as image rendering tools
- ▶ Available to configurator customers with Epicor ERP 10.2.300 and above at no additional charge
