

Product

- ▶ Epicor® ERP

Pre-requisites

- ▶ Epicor ERP 10.2.400 or higher
- ▶ Handheld devices on Android™ Devices 6.0.1 and higher

Benefits

- ▶ Paperless: Capture signatures and photographic proof of delivery
- ▶ Real-time, seamless integration with the Epicor ERP platform for increased productivity and data accuracy
- ▶ Modern interface built on the Kinetic Design System

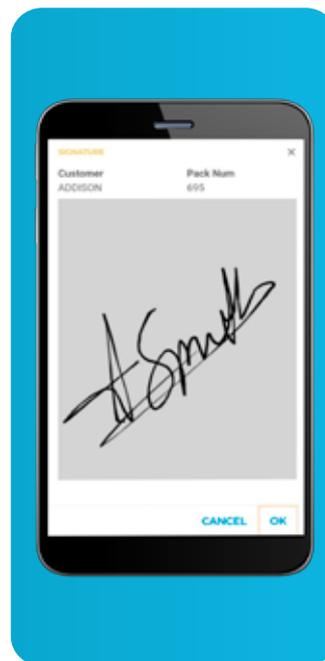

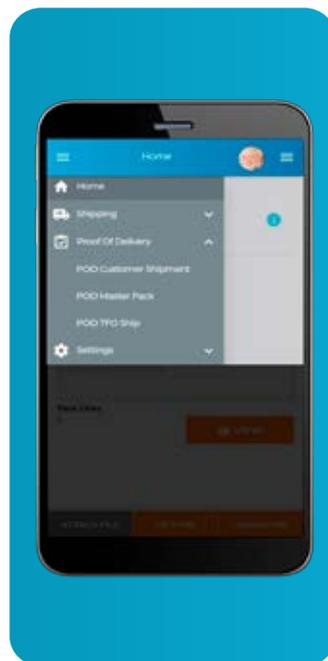

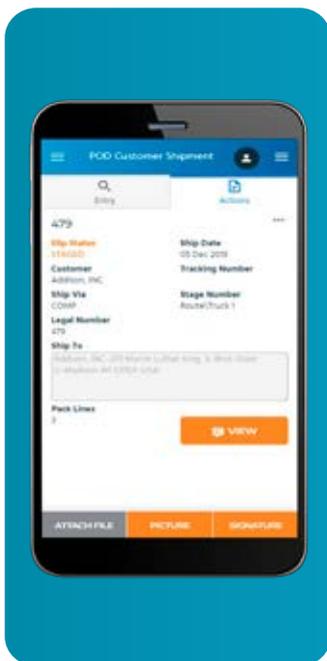

Fast, Accurate, Paperless Proof of Delivery

The mobile workforce in the today's supply chain is increasingly dependent on the latest technologies to deliver increased productivity and data accuracy. Epicor Mfg POD Lite is a handheld application, which is a component of the Epicor Mfg Wireless Warehouse application. It has the essential capabilities to enable the logistics workforce to perform fast, accurate, and paperless proof of delivery.

Running on handheld devices with Android™ 6.0.1 and higher, the software has the modern and intuitive interface expected of any mobile application.

Users select a desired Pack Slip number, filtering options are available to display only packs for a specific Ship Status, Stage Number (Route Number), or Ship Date. Once a Pack ID is selected relevant details for the selected pack are visible, including the number of pack lines on the selected pack. An ability to view those line details is also available.

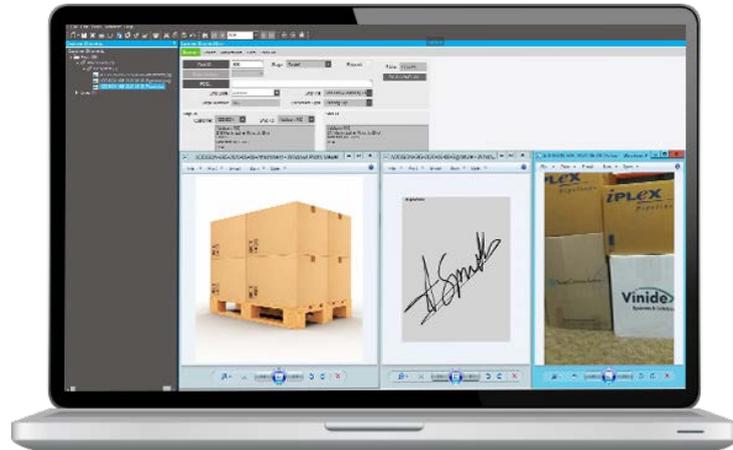

Paperless Proof of Delivery is quickly and easily achieved by a sign on glass capture for the signature and a photo capture with the device camera. Users can also attach files from the device internal storage to associate with this delivery. This same functionality exists for shipments to customers, for Transfer Orders, or if users are shipping Master Packs.

Real-time integration with Epicor ERP

Epicor Mfg POD Lite integrates seamlessly with the Epicor ERP platform, providing customer shipment confirmation, photos/images, and proof of delivery signatures directly to each Pack ID record on the ERP platform. This real-time integration results in significant time savings—compared to the time and effort of having the customer sign a paper copy and then scan/upload the individual documents.

Epicor ERP Customer Shipment Entry screen

Built on the Kinetic Design System

Epicor Mfg POD Lite has a modern and intuitive user interface built on the Kinetic Design system, which is also used for the Epicor ERP platform user interfaces. Together with the mainstream mobile application interface, this feature appeals to the multi-generational work force and reduces user training requirements.

Powered by BISCIT

Since its establishment in 2002, BISCIT has formed a strong relationship with Epicor. As an Alliance & Certified Partner, they are proud experts in delivering successful Epicor ERP and application development projects Australia-wide and overseas.

About Encompass

Encompass Solutions is a business and software consulting firm that specializes in ERP systems, EDI, and Managed Services support for Manufacturers and Distributors. Serving small and medium-sized businesses since 2001, Encompass has helped modernize operations and automate processes for hundreds of customers across the globe. Whether undertaking full-scale implementation, integration, and renovation of existing systems, Encompass provides a specialized approach to every client's needs. By identifying customer requirements and addressing them with the right solutions, we ensure our clients are equipped to match the pace of Industry.
